About this product

Heat is the silent productivity killer. When your warehouse, server room or machinery bay climbs above 35°C, equipment underperforms, workers slow down, and air conditioning bills spike. The SW AU C 110 stops heat at the roof — before it becomes your problem. Where it works best Server rooms and data centres — continuously removes heat produced by servers, switches and UPS systems Compressor and plant rooms — extracts intense localised heat before it can build to dangerous levels Warehouses and logistics facilities — creates a comfortable working environment and reduces WorkSafe heat stress risk Manufacturing and production floors — removes heat from machinery, ovens, presses and production lines Garages, workshops and trade premises — clears exhaust fumes, welding smoke and chemical vapours quickly Specifications Airflow 7,000m³/h PV panel 110W Voltage 24V DC Noise <70 dB(A) Dimensions 900mm × 300mm

Specifications

SKU	SW1100
Brand	Solar Whiz
Airflow	7,000 m ³ /h
Noise level	<70 dB
Price (incl. GST)	\$2,450.00
Availability	In stock

Frequently asked questions

What size Solar Whiz do I need?

Solar Whiz unit has a recommendation on what size homes they ventilate best. The recommendations for ventilating standard pitched homes are as follows and are based on our experience in the Australian roof ventilation market since 2010: 1. The SW-AU-R-28 - Suitable for spaces up to 180m². 2. The SW-AU-R-40 - Suitable for spaces up and above 250m². Many of our competitors recommend less capacity.

How many litres per second can a RAF unit move?

SW-AU-R-28: 1700 m³/h / 472.22 L/s. SW-AU-R-40: 2300 m³/h / 638.89 L/s. SW-AU-C-155: 10000 m³/h / 2777.78 L/s.

How many Whirlybirds is each Solar Whiz unit equivalent to?

The different Solar Whiz roof ventilation fan units are capable of moving 10-30 times the amount of air that a Whirlybird moves. The SW-AU-R-28, which extracts 1,700m³/h. Capable of moving between 10 to 15 whirlybirds worth of air. The SW-AU-R-40, which extracts 2,300m³/h. Capable of moving between 20 to 30 whirlybirds worth of air. This all depends on the type of Whirlybird, as well. An average Whirlybird moves around 100m³/h, and all our measurements and quotes derive from this measurement.

Can you over-ventilate your roof space?

The short answer is no - you can't over-ventilate your roof space. The long answer is that there's no limit to how much airflow you can have in your roof space. Provided you have enough roof ventilation airflow, you'll be continuously replacing the warm air in your roof space, flushing it out with cool replacement air. You can definitely under-ventilate, however, we will advise you of the best possible solution to get you the results you need.

How much is delivery?

Delivery is free on orders of \$500 or more anywhere in Australia. Orders under \$500 have a flat \$25 freight charge.

How long will my order take to arrive?

We dispatch from Erina NSW within 1–3 business days. Delivery usually takes 2–10 business days depending on where you are.

Do you deliver to WA, NT and Tasmania?

Yes — we deliver Australia-wide, including WA, NT, Tasmania and regional areas. Remote areas can take a few extra days.
